

Serial No.: 10/705,437

AMENDMENTS TO THE CLAIMS:

The following listing of claims replaces all prior listings of claims in the present application.

IN THE CLAIMS

1-12. (canceled)

13. (currently amended) A software supplying device comprising:

~~a communication unit communicating with a radio terminal device; and~~

a memory storing a ~~software control software~~ being downloaded by ~~a~~ said radio terminal device; and

~~a wherein said communication unit notifies said radio terminal device of a number of divided blocks for transmitting of said stored software control software before transmission of said stored control software occurs and transmits said divided blocks to the radio terminal device.~~

14. (canceled)

15. (currently amended) A radio terminal comprising:

a radio communication unit communicating with a software-supply device;

a memory storing a ~~software control software~~ presently involved in operations; and

a controller operates to inhibit ~~inhibiting~~ communications with said software-supply device for updating said ~~software control software~~ based on a power condition of said radio terminal device.

Serial No.: 10/705,437

16. (currently amended) A radio terminal comprising:

a radio communication unit communicating with a software-supply device;
a memory storing a ~~softwarecontrol~~ software presently involved in operations; and
a controller inhibiting communications with said software-supply device when said radio terminal is communicating with another device.

17. (currently amended) A radio terminal comprising:

a radio communication unit communicating with a software-supply device;
a memory storing a ~~softwarecontrol~~ software presently involved in operations; and
a controller stopping a download of ~~softwarecontrol~~ software from said software-supply device when the controller detects an operation for responding to an incoming call.

18. (currently amended) A radio terminal comprising:

a radio communication unit communicating with a software-supply device;
a memory storing a ~~softwarecontrol~~ software presently involved in operations; and
a controller making a request to said ~~software~~ software-supply device at least N times for receiving a plurality of divided control-~~software~~ blocks via a radio communication line for updating said stored ~~softwarecontrol~~ software.

19. (currently amended) A radio terminal comprising:

a radio communication unit communicating with a software-supply device;
a memory storing a ~~softwarecontrol~~ software presently involved in operations; and

Serial No.: 10/705,437

a receiving unit receiving information from said software-supply device concerning a number of divided ~~softwarecontrol software~~ blocks for updating said stored ~~softwarecontrol software~~, before starting a download of said number of divided ~~softwarecontrol software~~ blocks.

20-21. (canceled)

22. (new) A software supplying system comprising:

a radio terminal device adapted to receive communications and including a memory adapted to store a software application; and

a communication unit adapted to transmit to the radio terminal device both a) a number representing a quantity of divided blocks of the software application, and b) the divided blocks of the software application.
